Wie werden wieder Updates angezeigt?

Bzw. wo kann ich den Full Installer für die RC runterladen?

as griven said you have to add that bootarg

in my case i have also to revert OCLP patches and use SecureBoot ~~Enable-Default~~/[Sip](#) Enabled and also to clean config.plist from amfi bootarg.

Also in this way you may have the need to reset NVRAM different times to have success

if you use Bluetoothfixup next remember to disable it (it could block a succesfull update after delta update download)
