Thanks everyone. With your support and from the r/hackintosh community I got it working. Here is the post: <https://reddit.com/r/hackintosh/s/iHKwzxZe2> . The [bios settings](#) with the changes of the Subreddit worked. I will post a Github link with the EFI folder.

I'm gonna try and get Ventura running. I'm sure there will be problems so see you soon.

Thanks again 😊
