

Update von Big Sur AMD -> Ventura

Beitrag von „fabiosun“ vom 24. September 2023, 11:14

[mrxxvin](#) EFI you posted is the one you use succesfully with big Sur in the past?

if so you have only to update AMD kernel patches to latest to boot Ventura

so i would advise to update opencore and all the kexts, plus AMD kernel partches as i said

i f you like backup your EFi and try this one:

Kernel patches for AMD updated

Kexts and Opencore updated

add - v to see verbose message

youhave to add your SMBIOS serial and i would also chnge SMBIOS to MacPro7.1 (but also with your iMacpro it should work fine

if it will start i would also check your bootarg (unfairvga?)
