Hi to all 😊

could you test this on an Intel or arm OSX 14.1 RC rig?

open preview app

then set from view menu show markup toolbar:

Same thing happens on my machine on 14.1 Beta 3 (23B5067a) as well as 23B73

- instant crash of the preview.app - it does work with .ai files tho but crashes with all other pixel image files.

Manually selecting "export as pdf" is a work-around for now.
