

HELP!!! MacOS plötzlich weg nach CPU Wechsel von Ryzen 3 auf Ryzen 7. Dualboot PC (WIN11Pro + MacOS Ventura 13.3+)

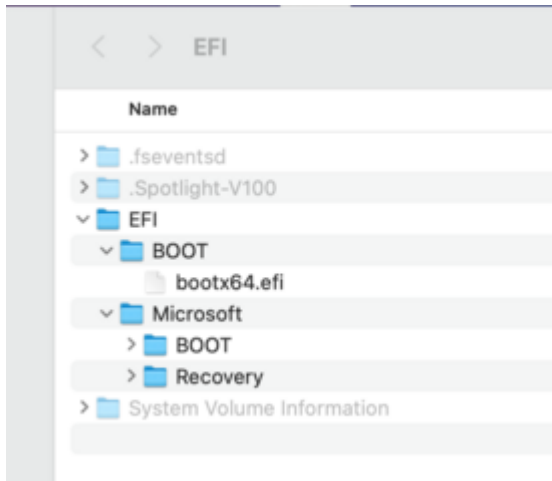

Beitrag von „fabiosun“ vom 25. Oktober 2023, 18:25

i think it is better if a user explain better in german language

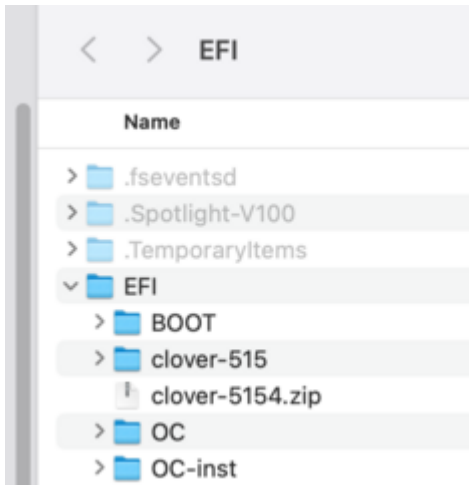

i try but verify well my instruction

Have you windows and OSX on a single disk in two partition?

however this below is the EFi of windows (i have on two separate disk (windows and OSX))

this below is my OSX EFI partition:

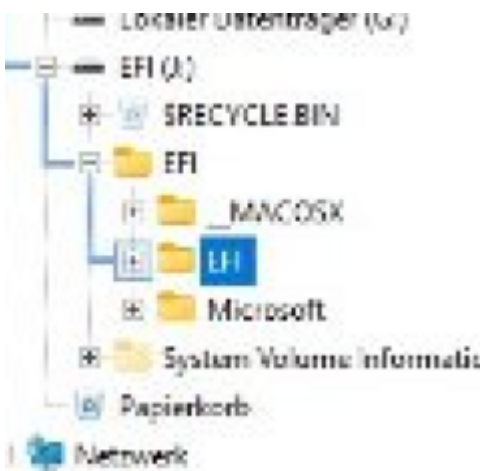

i boot windows starting with this efi and using opencore as boot loader
from here i can boot Windows or OSX

What was your previous working config?

From opencore you could boot OSX or Windows?

Separate disk for Windows or OSX?

this is your situation:

OC andBoot folders should be at the same level of _MACOSX folder i see in your picture
Not inside another EFI folder
