New build Suggestion

Beitrag von „xeligit" vom 26. Oktober 2023, 13:18

Hello friends

Please help me in my first build.

I am interested to create contents and not interested in gaming. The software's that I will be using will be Adobe premiere pro, After affects and Cinema 4D. I will be making videos in full-HD only.

I am interested to build a system which has windows 11 and Hackintosh (Sonoma) dual boot.

Things that concern me are:

RAM: 32 GB corsair vengeance

CPU: 13700K or 14700K – which one to purchase.

GPU:

For this single AMD GPU will be the best. But that should be able to run Adobe Premier pro for HD videos easily and should have shorter render time.

If that is not possible; is it possible to have:

Nvidia 3060 ti + AMD GPU of price around 200$. For AMD Gpu, I am not sure which one to take. Please recommend. I want to run windows with 3060ti and Mac (Sonoma) with AMD Gpu.

Motherboard:

I am also not sure which motherboard to take amongst (Asus, Gigabyte and MSI) that can hold the configuration. I know that for Hackintosh I will need different wifi and blutooth card. Mostly people suggested Fenvi T919.

Drives:

Nvme – 500 GB for windows installation

Nvme – 500 GB for mac (will this be sufficient)

Nvme – 1 TB for personal project files in windows.

HDD – 7200 RPM for personal files.

I have LG monitor (16:10)

Is there anything else that I have to keep in mind? Kindly suggest that as well.

Thank you everyone.
