Echt OC 0.9.5?

NOTE: This version of ocvalidate is only compatible with OpenCore version **0.9.5!**

OCS: Missing key DisableIoMapperMapping, context <Quirks>!

OCS: Missing key InstanceIdentifier, context <Boot>!

OCS: Missing key ConsoleFont, context <Output>!

OCS: Missing key GopBurstMode, context <Output>!

OCS: Missing key InitialMode, context <Output>!

OCS: Missing key PciIo, context <ProtocolOverrides>!

OCS: Missing key ResizeUsePciRblo, context <Quirks>!

OCS: Missing key ShimRetainProtocol, context <Quirks>!

Serialisation returns 8 errors!

UEFI->Output->InitialMode is illegal (Can only be Auto, Text, or Graphics)!

CheckUefi returns 1 error!

Da hast du nicht meine config getestet 😊

Das Update auf 14.1 hat schon mal nix am FAT Problem geändert.
