2022 beta

Beitrag von „hyux1" vom 29. Oktober 2023, 14:49

Since there is no longer much interest in Ozmosis, I won't be working on further versions. This one in the forum is the latest and if anyone needs support with it, I would be willing to help.

I would advise against using Darboot and Kernextpatcher.

If anyone wants, I can provide a debug version which can help resolve problems using logging.

With Ozmosis there is no way to boot Big Sur and newer. This won't change if no other developer deals with it. However, there is now apparently the option to flash OpenCore into the BIOS, which can be a replacement for Ozmosis.

I would recommend anyone who is still using ozmosis to upgrade to the 2022 version. Bios Ozmosis Catalina bleibt beim Start beim Apple-Logo hängen
