

macOS Installation auf einem Lenovo Thinkpad T490S

Beitrag von „breexly“ vom 10. Dezember 2023, 01:04

First of all I've got a Lenovo Thinkpad T490S I want build a hackintosh with.

Model: 20NY S2X41A (Specs: <https://www.productindetail.co...enovo-thinkpad-t490s-20ny>)

EFI: <https://github.com/sirsanndy/thinkpad-t490s-hackintosh>

1. Problem

I can't change the boot order with using ctrl + enter. I ticked the box at misc - security - AllowSetDefault

2. Problem

If I want to boot into Windows which is shown in the boot options it constantly crashes with the error: SYSTEM_THREAD_EXCEPTION_NOT_HANDLED

3. Problem

Airdrop and ScreenMirroring don't work. Bluetooth and Wifi work just fine. I heard you need a nativly supported wifi and bluetooth card like the Bcm943602cs. Is there any other way?

Thanks for your time. Appreciate every idea 😊
