[Schwarzkopf](#) as said in italian forum..you have to do by yourself a correct USB mapping of your system

if the EFI posted above work for you (it boots i mean)

You have to had in your kext folder the correct kext for wifi (the ones used from OCLP devs)

I see one have been well declared , you miss a piece for correct WIFI working

[Archive.zip](#)

above the two kext i use

below how they must be declared in your config.plist

IO80211FamilyLegacy.kext	V1.0	Yes	Contents/PlugIns/IO80211FamilyLegacy.kext	Contents/Info.plist	33.0.0	Any
IOSkywalkFamily.kext	V1.0.0.1	Yes	Contents/PlugIns/IOSkywalkFamily.kext	Contents/Info.plist	33.0.0	Any
