

Hilfe bei der Installation von Ventura

Beitrag von „fabiosun“ vom 9. Januar 2024, 15:27

[BadderSpider](#) EFI posted above has old amd kernel patches

i suggest to update them with the latest if you are trying to install latest macOS Ventura

6700Xt could work with the kext said above (no direct experience there)

you have two main problem in your rig;

a "G" CPU and a not officially supported GPU

It could work 😊

EDIT

EFI added

Backup yours then if it does a step forward from your initial hang you can add NootRX kext

[EFI 2.zip](#)
