

Huananzhi x99 F8D Dual LGA 2011-3

Beitrag von „gemini44“ vom 19. Januar 2024, 08:51

Hi [dreader](#). I also have the Huananzhi x99 F8D plus model. I flashed ([Elitemac site](#)) my Gigabyte Titan Ridge v2 card, but it does not appear on my computer in Windows 10 or OSX. Do I need to make any settings in the BIOS? By the way, I also have a maple ridge TB card. In OSX, IORegistryExplorer does not see the card, but in Hackintool, the data of the TB card appears under the PCI tab. Thank you for your help.

Bulent.
