The screenshot shows the 'Memory' section of macOS System Information. It displays a table of memory banks with columns for AssetTag, BankLocator, DeviceLocator, Manufacturer, PartNumber, SerialNumber, Size, and Speed. The table lists 12 banks, all of which are 128GB in size and 4800MHz in speed. The manufacturer for all banks is Kingston Fury Beast. The device locators range from ChannelE: DIMM0 to ChannelC: DIMM11.
