

OC AMD Neuling braucht Hilfe! OC Monterey Installer hängt sich immernoch auf...

Beitrag von „Bob-Schmu“ vom 27. Februar 2024, 23:29

@Frankx01

Sachen, die aus der config müssen.

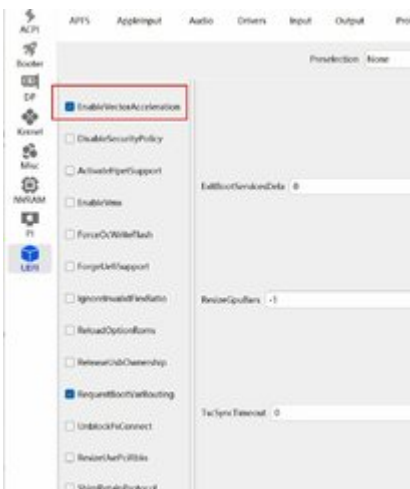

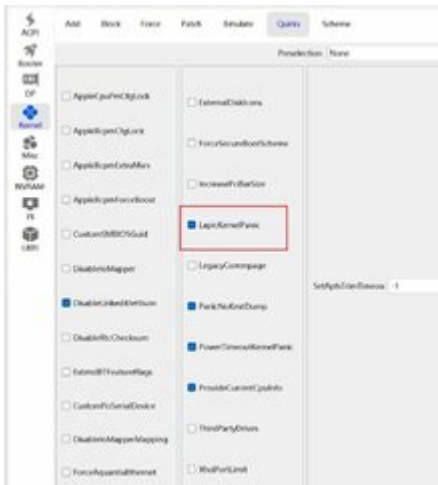

KernelFlag	Comment	Enabled	ExecutablePath	Platform	MinKernel	MaxKernel	Id
0	0	true	Contents/MacOS/0	Contents/Platform			Any
1	1	true	Contents/MacOS/1	Contents/Platform			Any
2	2	true	Contents/MacOS/2	Contents/Platform			Any
3	3	true	Contents/MacOS/3	Contents/Platform			Any
4	4	true	Contents/MacOS/4	Contents/Platform			Any
5	5	true	Contents/MacOS/5	Contents/Platform			Any
6	6	true	Contents/MacOS/6	Contents/Platform			Any
7	7	true	Contents/MacOS/7	Contents/Platform			Any
8	8	true	Contents/MacOS/8	Contents/Platform			Any
9	9	true	Contents/MacOS/9	Contents/Platform			Any
10	10	true	Contents/MacOS/10	Contents/Platform			Any
11	11	true	Contents/MacOS/11	Contents/Platform			Any

- **XHCI-unsupported**
 - Needed for non-native USB controllers
 - AMD CPU based systems don't need this
 - Common chipsets needing this:
 - H370
 - B360
 - H310
 - Z390 (not needed on Mojave and newer)
 - X79
 - X99
 - ASRock Intel boards (B460/Z490+ boards do not need it however)
- **NVMeFix**
 - Used for fixing power management and initialization on non-Apple NVMe

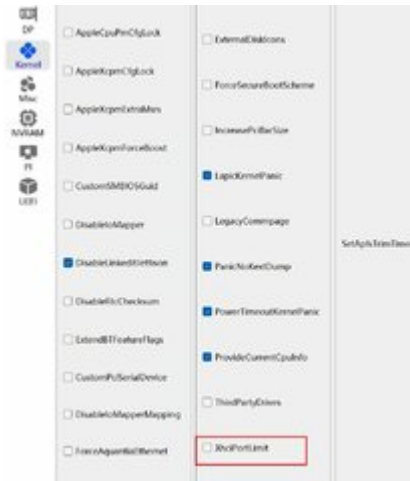

Du hast ein AMD System, kein Intel Chipsatz System.

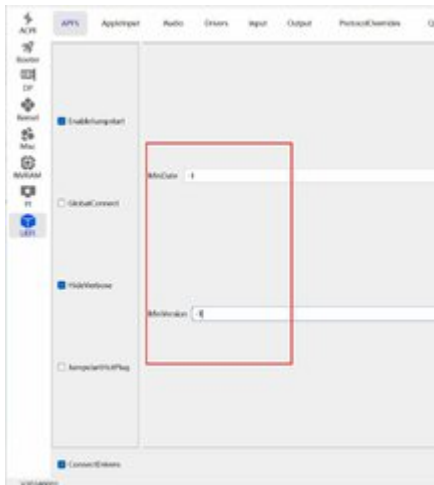

- **SATA-unsupported**
 - Adds support for a large variety of SATA controllers, mainly relevant for laptops which have issues seeing the SATA drive in macOS. We recommend testing without this first.
 - Big Sur+ Note: **CtlnAHCIPort** will need to be used instead due to numerous controllers being dropped from the binary itself
 - Catalina and older need not concern
