HI

sorry if I'm writing to you, I don't even know how to write in this forum. Asus has removed

support and all downloads for this motherboard, and has deleted all files from the world. The reason is unknown. Support is not responding. I'm looking for the original latest bios 4201 to download. And so I found in this forum you who modified the bios. I hope you still have the original file to download. Thanks if you can share it
