[Kalzu](#) steps proposed by [apfel-baum](#) help to become more familiar

if you have a real mac or a working other hackintosh you can download from there your preferred OS to instal (from Monterey to Sonoma)

then, with terminal app you can create an installer for your hack and put there an EFI to try to sove initial problem

if you like to instal Monterey this is terminal command:

Spoiler anzeigen

if you like to instal Ventura:

Spoiler anzeigen

MyVolumeName is your USB pen for the installer

Also the OSX path are good if you have downloaded and put in your applications folder the full OSX installer
