

Secure Patch :: from 2018 to 2024

Beitrag von „Full-R“ vom 15. Mai 2024, 06:27

Add small memo how to run server mode more better ...

Silently works without Intel solutions on a Penryn Core 2 Duo arch like a Haswell to make compiling process slower and more carefully.

Code

1. `sudo nvram boot-args="MountEFI=0x1 kextlog=0xffa debug=0x0 dtrace_dof_mode=0x0 trace=0x0 io=0x0 lcks=0x1 platform=ACPI acpi=strict arch=x86_64 rootless=0x1 wpkernel=0x1 srv=0x1 serverperfmode=0x1 idlehalt=0x1 slide=0x1 dart=0x1 keepsyms=0x1 kext-dev-mode=0x1 amfi_allow_any_signature=0x1 darkwake=10 -force64 -no_shared_cr3 -zc -no-zp -no_compat_check -rwroot_hack -xcpm"`
