Also opencore is easier to use than OZM.

You follow the dortania guide step by step and Bähm in 90% of the time a running system.

That OZM is easier than OC is only true if given, al6042, kuckkuck, derHackfan, Fredde2209, crusher and all of the users i have not mentioned have allready done the work for you.

For reasons i had to mod the bios for my Z77 board by myself and it was a lot of reading and more work compared to OC.

Also the risk of flashing the Bios and possibly brick the board.

OC is saver, easier and it just works ...

OZM is a dead horse. No need to ride it.
