They can invest their time in something else.

As extensive as OC is today, they would never get the old OZM versions.

Also, OZM would have to be loaded from the EFI on newer systems anyway.

That's wasted time and effort.

You can Flash Ozmosis also on newer Systems.

Why old versions? Look at the 2023 version, it has nothing to do with the old versions. I'm working on newer versions!

Also opencore is easier to use than OZM.

You follow the dortania guide step by step and Bähm in 90% of the time a running system.

That OZM is easier than OC is only true if griven, al6042, kuckkuck, derHackfan, Fredde2209, crusher and all of the users i have not mentioned have allready done the work for you.

For reasons i had to mod the bios for my Z77 board by myself and it was a lot of reading and more work compared to OC.

Also the risk of flashing the Bios and possibly brick the board.

OC is saver, easier and it just works ...

OZM is a dead horse. No need to ride it.

You hardly have to configure ozmosis, flash bios and boot macos.
