+ may i ask if you see that update also in your hack or only on your M2 system?

thank you

Hi, yes the update is displayed with me. the top is spinning, as soon as it goes on I'll let you know...

Since it took me too long to search, I cancelled. When I repeated the update process, I immediately got the message that the system is up to date but without installing the update.

Since I still had beta 3 on it, I'll start the update to beta 4 here, let's see if it then likes to install 15.1..

No luck.... after updating beta 4 it searches for 15.1 with a following note that the device is up to date
