

Ventura Ryzen 5: L Ä U F T !

Beitrag von „wu ming“ vom 31. Juli 2024, 16:53

ciao ragazzi, Bonjour les gars,

Zitat von @ fabiosun

if you are using a system superior to BiguSur the network kext seems strange to me that it works correctly for i211

If that's the case we have to revise a bit the last things written over the years 😊

no, it's all true. nothing needs to be rewritten. rather, i need to buy a hackintosh compatible wifi card. i think there will be some for a small price that are compatible. The whole world has problems with the I211-At I read today and yesterday. The internet is even slower than a snail on the box. And things can't be solved under Ventura. The keys in the network are either out of date or not for I211-AT. And I won't be writing any more kext for it in my current second life.

So I'd better buy a compatible Lan card! But which one? Sure, I'll google it... and ask the chemist. the doctor.

I found something with G4, in the BIOS, 'Above 4G Decoding'. I found something about it on the net. The gamers think it's great. They are thrilled to find this hidden function and they all activate it. When I activate it, I am also offered Resize Bar Support. It says it should be set to automatic. I have tried it. The box hangs when booting. Even without the NCPI Booarg. Something has to be set in the config?, but I haven't got that far yet.

Ci vediamo

has there ever been a "Hackintosh Stammtisch" in Italy? :-))
