

macOS 15 Sequoia Beta im Test

Beitrag von „fabiosun“ vom 1. August 2024, 08:50

if you use macOS Sequoia, this is the KP issue if you are patched with OCLP.

Basically you don't block the original sequoia kext and try to replace it with an old one. the kp is normal in this case

better to leave max kernel without any value or put it appropriate for sequoia
