

Sehr schlechte OpenCL Performance

Beitrag von „fabiosun“ vom 9. August 2024, 15:18

mmmh it is the one i use i cant say if it needs some permission

however i see you are using Algrey fix pat patch

to improve performance in OpenCL/GL you can disable it and use the Shanees one

for now if you cant do good resuòt with DP or with SSDT you can try also with NootRX kext and see the differences

in Opencil your system should have a result greater than 100000 as you see in my picture above

i have tried to modify your config.plist

use also the kext attached (backup yours first)

in this config i use DP properties with your path

removed pikera from bootarg

used Shanee fix patch
