

AMD hackintosh, ich kann irgendwie nur OSX catalina installieren

Beitrag von „fabiosun“ vom 9. August 2024, 17:43

[Niloc](#) your EFI is too much old (some kext does not work anymore like Smaltree)

As said patches are also too old and the main problemo for a good experience is that your GPU (GTX 1080) is not supported in OSX from HighSierra

RX 480 i see in your left profile is good also with latest OS (Sonoma)
