i did what i am saying from my initial post here 😊

disabled a patch used the other 😊

I would like to say you should understand why ACPI method does not work

if you can send an IOREG log without using NootRX (i know no acceleration there)

i see some bridges i do not underst (i am not an ACPI expert so it is my fault) 😊

Alles anzeigen

Damn then I messed up my configs and booted with the wrong one... Dammit.

Gonna disable NootRX really quick and run IORegistryExplorer

EDIT: File is attached
