

Hackintosh nicht funktionell, startet nicht

Beitrag von „Bob-Schmu“ vom 23. August 2024, 23:03

[Zitat von AlexanderK21](#)

ich habe die kompletanleitung befolgt die auf dortania angezeigt wird

Dann hast du sie nicht richtig gelesen.

Betriebssystem: Windows 11

Add

Info

This is where you'll add SSDTs for your system, these are very important to booting macOS and have many uses like USB maps, disabling unsupported GPUs and such. And with our system, it's even required to boot. Guide on making them found here: [Getting started with ACPI](#)

Required SSDTs	Description
SSDT-EC-USBX	Fixes both the embedded controller and USB power, see Getting Started With ACPI Guide for more details.
SSDT-CPU	Fixes CPU definitions with B550 and A520 motherboards, do not use if you don't have an AMD B550 or A520 system. You can find a prebuilt here: SSDT-CPU.kam

Note that you should not add your generated [SSDT-USB](#) here, it is already in your firmware. See

 SSDT-EC.aml

 SSDT-EC-USBX-DESKTOP.aml

Das Tool <https://github.com/ic005k/OCAuxiliaryTools> nehmen und damit die config/EFI bearbeiten.
