

# Anleitung für Broadcom-WLAN-Patch unter macOS Sonoma

Beitrag von „fabiosun“ vom 13. September 2024, 09:00

[julian91](#) main job by hand to do is to add the block of new kext in your config.plist

Then you have to declare the kexts in your config.plist (old working kexts) and add amfi.kext (latest version)

Execute compatible OCLP for sequoia and the job is done

You could have need to reset your NVRAM (not for all systems)
