

Ryzen EFI bei Sonoma topp aber Sequoia schrott? Ideen?

Beitrag von „fabiosun“ vom 22. September 2024, 16:47

If you are installing from scratch disable this two patches because they are useful only for few people (maybe laptop CPU)

others part of your config .plist are good in my opinion (maybe you can avoid to use setvirtual map quirk (but your blackscreen is not rrelated)

Try in boot menu to clean (reset Nvram if you like to disable those two patches above)
