

Restart and sleep/hibernation not working - HP DV7 Laptop

Beitrag von „bibbeandreatta“ vom 2. Oktober 2024, 20:21

I have this old HP DV7-1183cl laptop that I haven't used for a long time. It's not my main PC for daily use. I was curious to see if it could run OSX. I was able to install BigSur, Monterey and Ventura and was surprised that it runs very smoothly. Almost everything works, including native CPU and GPU management. However, restart and sleep/hibernation don't work. I haven't been able to find any solution to solve this problem. I would appreciate if anyone could help me solve these problems.

I'm using Opencore 1.0.0 with only the DSDT edited. I believe that the DSDT was well edited. Thanks.

HP DV7-1183cl specifications:

Intel Core2Duo P8700 2.53 GHz

4GB RAM

NVIDIA GeForce 9600M GT (10de:0649)

17.0" WXGA+ 1680x1050 built-in LCD
