

Intel W-Lan ax210 sequoia geht nicht mehr

Beitrag von „schrup21“ vom 8. Oktober 2024, 07:08

[Michael1965](#)

Laut Intel hat deine GPU die Device ID 0x9BC5:

<https://www.intel.de/content/w...0-ghz/specifications.html>

Laut WhatEverGreen FAQs:

Native supported DevIDs:

CML: (=empty framebuffer)

0x9BC5

<https://github.com/acidanthera...and-comet-lake-processors>

Sollte theoretisch folgendes DeviceProperty ergeben:

PCI IDs	Key	Data Type	Value
1. PciRoot(0x0)/Pci(0x02_00_00_00)/Pci(0x02_00_00_00)/Pci(0x02_00_00_00)	1. ASPM_L1_00000000	Data	0300C300
2. PciRoot(0x0)/Pci(0x02_00_00_00)/Pci(0x02_00_00_00)/Pci(0x02_00_00_00)	2. ASPM_L1_00000000	String	InternalGPU.2.0
3. PciRoot(0x0)/Pci(0x02_00_00_00)	3. device-id	Data	9BC50000
4. PciRoot(0x0)/Pci(0x02_00_00_00)	4. device_type	String	VGA compatible controller
5. PciRoot(0x0)/Pci(0x02_00_00_00)	5. model	String	Intel UHD 630

Edit: DeviceID gehört gedreht (WEG FAQs):

"The bytes in Properties must be put in reversed order. For example: framebuffer 0x0166000B would be put in as 0B006601, DevID 0x1E3A would be put in as 3A1E0000"
