

OpenCore Sammelthread (Hilfe und Diskussion)

Beitrag von „fabiosun“ vom 8. Oktober 2024, 17:40

Some time ago i had care of AMD part in OCAT because there was some problem in some config posted by other users

Talking with the developer he explained that his apps update itself dynamically with few work by the developer

It seems that this new "unload" opencore UEFI section it is not added dynamically! 😊

i added with a plist editor and OCAT has now 0 error, but, it is not possible to select Unload in its graphical interface

AI is failing for now 😊

I still use OCAT but I no longer curate the AMD part which I asked to be eliminated since the checks that have to be done when a user proposes his own set of configuration were not reliable
