

OC DELL Latitude E6420

Beitrag von „Mo-5590“ vom 6. Februar 2025, 16:57

Hi everyone,

I first updated the bios to 1.38 (December 2024)

second, this is the second time I try to install Sequoia, latest 15.3 with my own opencore efi and clover

thirdly, I spent a lot of time using the both SSD (NVme or 2.5") and in my case it is stuck in the first part at 12min

only when I use an old and classic hard drive HDD everything will be fine

I just tell this to masters to also solve SSD problems in efi or kexts

Finally, my Dell Latitude E5590 looks like a complete new 2025 MacBook

with /

works

A great big thanks to the Hackintosh masters in the world

I'm sorry

But finally i use an external SSD 2.5" with TeamWork 128Go

With OpenCore efi

And all it fine

I add a pic too
