

# Gigabyte Z390 DESIGNARE: OpenCore-EFI-Ordner und Anleitung

Beitrag von „apfel-baum“ vom 24. Februar 2025, 18:40

[gornik](#)

how to add an driver to the efi/drivers

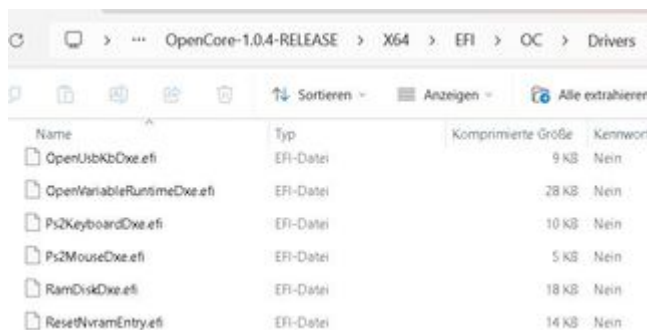

step 1: download the package

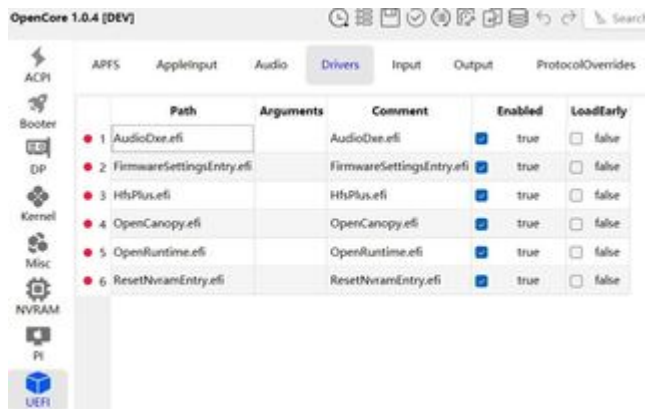

step 2: ->release

step 3: open the archive, extract the archive/components, choose/copy the resetnvramentry.kext

step 4: open the opencore auxiliary tools + config.plist , and put/paste the file to your-/the -efi->oc->drivers folder.

don't forget to save now. -> disk symbol. at the next start, it should be visible beneath other drivers

this is an example, how to put the "resetnvramentry.efi" driver to your existing config.plist/efi

Ig 😊
