If the board hat uefi, switch to legacy-mode

I recommend Shanees and Bronyas kernel, depends on os-Version

Kernels-Links are in Posts at the first site. Prelinked Kernel too. If you use a Prelinked Kernel, you only copy it to the folder.

My method, in this Thread ist, Using **Transmac**, You load the dmg-File, an create an Bootloaderstick. Try the clover, Enoch, and OpenCore dmg. Every bootloader has pros and contras.

and use the bootflags.
