

Erledigt Absturz mit Plex

Beitrag von „thomaso66“ vom 1. Dezember 2013, 12:57

Ist das Rendering überbaut GPU unterstütz? Ich meine das es nur den Prozessor belastet.

Auf was hast du die übertragungs Geschwindigkeit eingestellt? siehe Bild

The screenshot shows the Plex Media Server settings interface. The URL in the address bar is <https://forums.robertsspaceindustries.com>. The top navigation bar includes links for 'Plex Media Server' and 'Plex/Web'. On the right, there's a link to 'Erweiterte Einstellungen zeigen' (Show advanced settings). The left sidebar has a dark background with white text, listing 'Allgemein', 'Dashboard', 'Suche', 'Player' (which is highlighted in orange), and 'Synch.'. The main content area has a light gray background. It shows 'Streaming Qualität' (Streaming Quality) settings. Under 'Lokale Qualität' (Local Quality), a dropdown menu is set to '20 Mbps, 1080p'. Under 'Remote Qualität' (Remote Quality), another dropdown menu is also set to '20 Mbps, 1080p'. Below these, there are two radio buttons: 'Player' (selected) and 'Sync.'. There are three checked checkboxes: 'Direct Play', 'Direct Stream', and 'Immer die höchste Auflösung benutzen' (Always use the highest resolution). At the bottom, there are two buttons: 'Speichern' (Save) and 'Abbrechen' (Cancel).
