Erledigt Lenovo U510 Speedstep Problem

Beitrag von „zorangajic" vom 3. Dezember 2013, 19:42

sorry, I do not understand german, but from translation I understand that if I patch my DSDT and SSDT with the files uploaded by rubber fish (we have the same model) my turbo boost will work? as I understand I need also to converted SMBIOS to MacBook Pro 8.1 because right now I have it on MacBook Pro 10.1?

I would appreciate step by step guide, the google translate is not always accurate, I don't want to ruin my system, thank
