Erledigt El Capitan popping sound (iMac 14,2)

Beitrag von „nikoZ" vom 5. August 2015, 14:58

Hello everyone!
It's there a way to disable El Capitan popping sound? Other than changing SMBIOS to MacPro 3,1?
I tried to install antipop but it's not working anymore into El Capitan, on Mavericks I don't have any problems.
Waiting for suggestion.

Thanks.

What is the Problem with the Systemdefinition Mac Pro 3,1? All the Hackintosh`s i build have this Systemdefinition. Perhaps it is the most adaptable one!

I've just a real good Sound-Kext for Your Hackintosh. It is the Original from the Quo-Board, running with all ALC892-Sound on Z77 und Z87 Boards without any problems. Take the Version 10.9 for all new OS X..

I'm using iMac SMBIOS for a better power management by ssdt implementation and better compatibility.
Thanks for tips.
