Erledigt # Ozmosis Sm bios defaults

Beitrag von „nrchandar0100" vom 1. Februar 2016, 15:24

Greetings,
I run ozmosis latest version from you on my Z97 D3H with Nvidia 210 and 4th gen core i3 basic model processor. my need is i want to change the default plist fom given mac pro to imac 14.2 to which i have allthe needed datas such as MLB System s.no and so on. i request your help to guide me how to do it, is there any available cusomised default plist and where?. can i edit given default plist and by how?. Please help me.

This being my first communication in the site. my heart felt thanks and congratulation for the great and commendable work on Ozmosis Ram

Welcome

Beitrag von „YogiBear" vom 1. Februar 2016, 17:58

Hello and !

Running Ozmosis there is no defaults.plist. But it's possilbe to use one

Just modify the attached basic defaults.plist with TextEdit (or the editor of your choice) and move it afterwards to /EFI/OZ/ (on your EFI-partition/ESP). There is a German guide in our wiki: https://www.hackintosh-forum.d...-der-EFI-Partition-laden/ I'll try to to translate it if needed.

Hi nrchandar0100,
welcome to our forum.

The Standard_Defaults.plist from the previous post contains some informations where to put values which you should gather from the Clover Configurator SMBIOS Wizard and the small app called Apple MAC Hack.
They are in german, so try to see if you can figure out the needed contents and if you have any questions, don't bother to ask...
