Nvidia gtx 970 and ozmosis

Beitrag von „ziskinb“ vom 13. Januar 2017, 12:06

Hey I am trying to move from Clover to ozmosis
only problem is load nvidia drivers some one can help please
i edit config.plist
reset nvram
check nvram -p
but still can't load

Hello,
sorry for my bad english. My english is bad but my german is better 😊

To start a constructively thread please tell us your hardware specs and save them in your profile.

[Zitat von ziskinb](#)

config.plist

For sure? I only use clover. But with ozmosis you have to change the defaults.plist

And why you want to switch from Clover to ozmosis? What is the problem with clover?

best regards

Patrick

Its probably a wrong variable in your defaults.plist.

But first of all you need to understand that theres no config.plist for Ozmosis. So you cant continue using your old config.plist from Clover with Ozmosis. To set certain setting with OZ you'll need to generate a defaults.plist for your Hackintosh and afterwards you'll be able to change settings within this defaults.plist also regarding the nvidia driver and card.

And all the help we can give you can only base on your information about your System. So please use the profile settings, within "About me", and add your hardware details.

Juhu... [@derHackfan](#)

Do you already use a "patched" Defaults.plist in EFI/Oz? If you do so, please try to upload it here, so that we can have a look at it. If you don't, we can extract the one, that is in your Bios, edit it and send it to you, so that you can put it in EFI/Oz.

ok start of all thank you fredde2209 you are the best
my system specs is

asus z97 deluxe
i7-4790k
32GB Kingstone 2133MHz of ram
asus GTX970

i change the osmosis bios that i took from fredde2209
remove all sensors kexts, remove kextEnabler and delete disablekext
change osmosis default plist
for now i install El Capitan 10.11.6 and all works without default.plist in EFI/oz/
i read that sierra 10.12.2 change boot config and now in clover we need to put new string web
drive maybe this is the problem 😞
my result system were good geek bench single core:5000 multicore:17000
the oZmosis work good i have to say like clover
I attach files thank you all
