

## **Erledigt** Virus in Hackintosh

### **Beitrag von „Pietra“ vom 4. Februar 2017, 00:29**

I am new to hackintosh, I was wondering if there is a virus in hackintosh?

Its the same as viruses for Mac. Theres no difference between hackintoshs and macs in terms of software so there'll be no virus specifically for hackintosh 😊  
But all viruses that exist for normal macs also work on hackintoshs.

Can you use anti-virus on Hackintosh?

---

### **Beitrag von „derHackfan“ vom 4. Februar 2017, 08:02**

Of course. 😁

You can use Avast. Does not cost anything. And does not burden the system so much.

or as an alternative to avast you may also use Sophos Antivirus for macOS it's free for personal use: <https://www.sophos.com/de-de/p...for-mac-home-edition.aspx>
