Update with hackintosh Ozmosis

Beitrag von „Pietra“ vom 30. April 2017, 22:16

I was wondering if it is possible to upgrade from 10.11.6 to 10.12.4 using Ozmosis?

Beitrag von „griven“ vom 30. April 2017, 22:26

Yes it is possible 😊

Make sure you use a rom which is named as Sierra Ready und has an iMAC 14,2 or 14,1 System Definition set and you´ll be good to go. This one should work for you: [Mod für das Z77X-UD5H](#)

It depends on:

- what's your current Ozmosis Version
 - what's your current System Definition, including: are you using a dedicated Defaults.plist in your hidden EFI-partition?
-
