Hello everyone, I ask you to help someone who came across or knows how to fix the shutdown of the laptop. When you click on the shutdown, it reboots. In clover fix and halt enabler not work. In the [BIOS settings](#), I tried all the items. I'm sure that the problem is in DSDT.aml. Help friends.

Hey, Whats about you Hardware?

Beitrag von „al6042“ vom 7. September 2017, 09:59

Good morning Sergey and welcome to the forum... 😊

You already asked the question in the following thread: [Lenovo E560 - Clover - EL Capitan](#)
Please do not post the same questions in different parts of the forum, that might be regarded as Spam and you wouldn't like the consequences... 😊

[Zitat von Dr.Stein](#)

Hey, Whats about you Hardware?

Lenovo ThinkPad e560, Intel Core i7 6500U, Intel HD Graphics 520 SSD 256

Beitrag von „al6042“ vom 7. September 2017, 10:50

Please add your Hardware either in your signature or your profile, within the section "About me"...

In that case those details will be automatically added to all your posts and nobody has to search or ask for them in future threads... 😊
