macos high sierra asus maxium VI

Beitrag von „patricia2626“ vom 4. April 2018, 21:38

i got a intel i7 4790k haswell

samsung 940 ssd

660 gtx 2vram

asus maximum hero VI

it hard as i use transmac to format and restore dmg and use viertualbox to efi folder and edit more.

i am reading german becuase google to english

the 660 is a Problem in high Sierra, you would get some glitches.

the processor Looks good but I dont know if the Motherboard is compatible.

and I would suggest getting a real mac and doing it like in the tutorial in the Forum.

Hello [@patricia2626](#) and welcome to the forum... 😊

Board and CPU are fine, but the GTX 660 is known to have issues with High Sierra, which are not solved yet.

Beitrag von „Commo“ vom 5. April 2018, 02:37

You said you're using TransMac and a .dmg file? Where did you get the .dmg? The only sources for macOS that are supported here, are a Retail Snow Leopard DVD or an USB installer created on a real mac ...

Beitrag von „patricia2626“ vom 5. April 2018, 03:17

i try macos high sierra before it worked and the problem may be new apple format as not sure i want 560 aero amd <https://www.amazon.com/MSI-RX-...fRID=JC2N5ARGXFGX8T7XAGNK>

youtube and people share there download dmg imagen to format and restore as i try to use virtualbox to edit config and use clover tools to make it bootable as it work before

Beitrag von „hackintoshhood“ vom 5. April 2018, 04:23

Alright, the forum won't offer support for you until you get a Snow Leopard retail DVD or access to a real mac or Hackintosh! distributions are not supported here...

i have snowleapord dvd

Beitrag von „nockcx“ vom 5. April 2018, 20:05

I think in the next step you need to run it in a virtual machine and create the usb installer
