## **Who can help me convert the default.plist (Clover to Ozmosis) ?**

**Beitrag von „s0910187“ vom 30. Juni 2018, 14:04**

Who can help me convert the default.plist (Clover to Ozmosis) ?

I try to use the Ozmosis ToolBox, but it doesn't work.

Anyone can help me ? thanks!

I upload the clover config file "config.plist" , please convert to Ozmosis config file or ffs ,thanks very much!

Hi and welcome to the Forum... 😊

Please add your hardware details either to your signature or your profile, within the section "About me", before we can try to help.

These infos are necessary to create a specified defaults.plist.

Thank you for your reminder, I have increased.

Do you have a working Ozmosis-ROM for your Coffee Lake Board?

If so, all the DSDT Renames, Patches and Drop Tables will not be available within the defaults.plist.

Also the FakeID for IntelGFX and the Audio Inject won't work.

All the KextsToPatch-entries need the Kernext-Patcher within the ROM to be added into a KernextPatcher.plist...

Are you sure you want to fumble around with Ozmosis on your Board?

Clover is the better solution in my opinion.

I want to try OZMOSIS for my Coffee Lake Board.

I have a mod OEMDXE.ffs to replace Ozmosis.dff.

But I do not know how to make OzmosisDefaults.ffs from clover config.plist.

So, I need someone to help me convert the default.plist (Clover to Ozmosis) .

In that case try these two files...

Defaults.plist belongs to the folder /EFI/Oz.

KernextPatcher.plist belongs to the folder /EFI and only works, if the KernextPatcher.ffs is also part of the Ozmosis-ROM.

This Defaults.plist will invalidate my BIOS. I had to clear coms and refresh the original bios.

I don't believe that this is connected to the defaults.plist.

Any changes to your BIOS wit the UEFI-Tool, MMTools or whatever other application will make your ROM unusable...

That's why I already asked if you have an already working ROM for your Coffee Lake Board...

The problem itself is already common knowledge, thatÄs related to the different approaches between Aptio 4 (working) and Aptio 5 (not working) ROMs.

That is also the reason why I told you to stick with clover, which is known to work without fumbling around with a ROM you might never be able to work with Ozmosis.

[Zitat von s0910187](#)

This Defaults.plist will invalidate my BIOS.

Another possibility would be that your ffs conversion was faulty... Here's an OzmosisDefaults.ffs for you:
