## Build mini itx + wacom cintiq 22

**Beitrag von „axel9546“ vom 2. September 2018, 18:35**

hey guys! So i would like to make a new build. My current setup would be the hackintosh and the cintiq 22hd that will be connected with a DVI cable to the mobo. Parts: <https://pcpartpicker.com/list/B4qxxG>

Mobo : Gigabyte Z370N wifi Cpu : i5 8400 Ram : 16gb (i picked ballistix) Storage : Nvme ssd evo 960 Fan: ? Power supply : ? (125w)

So i have few question. - As im gonna use this build only with photoshop, web sufring and need bluethoot for the apple keyboard, do you know if the 630uhd can handle photoshop, and more important the cintiq dvi connection will be avaiable? Because the cintiq 22hd has a dvi connector, that i maybe can connect by display port or hdmi, but do you think the 630 uhd could do the job? Or i need a gpu? In that case i would buy the i3 8100 and save money for a gpu

do you know any little case i could buy that resemble the mac mini? For the supply i saw many cases have a internal 150/250w ps, i dont know, are they good?

Ty

Well it depends on usage case...

The 630uhd has enough power to satisfy basic needs. If you don't plan to perform any big tasks on Photoshop such as batch operations on plenty of Images you're good to go. For basic

image manipulation Intels 630uhd iGPU offers more than enough power to handle all these tasks. The next thing is the wacom cintiq 22 which uses DVI-I to communicate with the PC I am unsure if this would work with macOS at all...

your computer hardware is enough for photoshop , edit photos or digital painting .

my computer have a graphics card nvidia gtx 1060 . it works well. I have a xp-pen Artist 22E Pro ( <https://www.xp-pen.com/product/63.html> ) Drawing Tablet With Screen . it's a cheaper alternative of wacom cintiq 22hd . it works well with photoshop and illustrator.
