# Erledigt How to do customize the Ozmosis (OZ) GA-Z170-HD3 motherboard BIOS?plz

### Beitrag von „plutosherry“ vom 5. September 2018, 04:42

How do I customize the Ozmosis (OZ) GA-Z130-HD3 motherboard BIOS? 

I had customized the GA-Z97MX-G3 motherboard BIOS OZ firmware myself before, and tried to customize the GA-Z130-HD3 OZ firmware in the same way, but couldn't boot it 

(because the ROM file was short of space left, I deleted some unused modules to expand the space required by the oz module)

Are there any good suggestions or ideas? OR....
Who can help me customize the GA-Z170-HD3 motherboard BIOS for Ozmosis? Thanks alots!

Hi,

there is possible to create OZ bios on 100 series motherboards but it`s more dificult than old series. Unfortunately you have motherboard with 64 Mbit bios and there is no space for Ozmosis. More space is in 128 Mbit. Have a look on this link. There is step by step guide: https://www.insanelymac.com/fo...ries-skylake-cpus-and-up/

Cehos

Thanks for your reply!!

This means that 64Mbit BIOS can only delete some useless modules inorder to add oz modules.....
OR..... try on Efi\ Directory ?
There are some difficulties.

I`m sorry but I don`t have expirience with this board. It means, I don`t know how much files you can insert to this bios. Use plesase MMTool and after each file save it. If you don`t have a place in your Bios MMtool give you error message. Yes, some files you can insert to EFI partition. Try it please and let as know. Good luck

cheers

I will take the time to test it. If it is feasible, I will come back for feedback. Thank you!

Please have in mind that OZ on series 100 motherboards is highly experimental chances are high that you end with an invalid or destroyed rom Image or an unbootable System.
