## **Lenovo Thinkstation S30 (model 4352) Xeon E5 1620 V2**

**Beitrag von „xayide“ vom 2. November 2018, 21:18**

I have all working except for USB 3.0 ports and PM. CPU is only using 1.2Ghz but Bae and turbo is not working which is 3.7 and 3.9 Ghz. Anyone can help?

Hi and welcome to the forum... 😊

I guess without more details in regards to your hardware and maybe your current EFI-Folder helping you might be tricky.

Please add your hardware details either in your signature or your profile, in the section "About me".

Hello!

Thank you,

I updated the profile with the workstation spec. I think the relevant efi folder is in the debug.zip  
It's clover.
