BIOS swipes card successfully, but the apple system card is installed at the startup stage, only the white apple logo is displayed, everything is suspended.

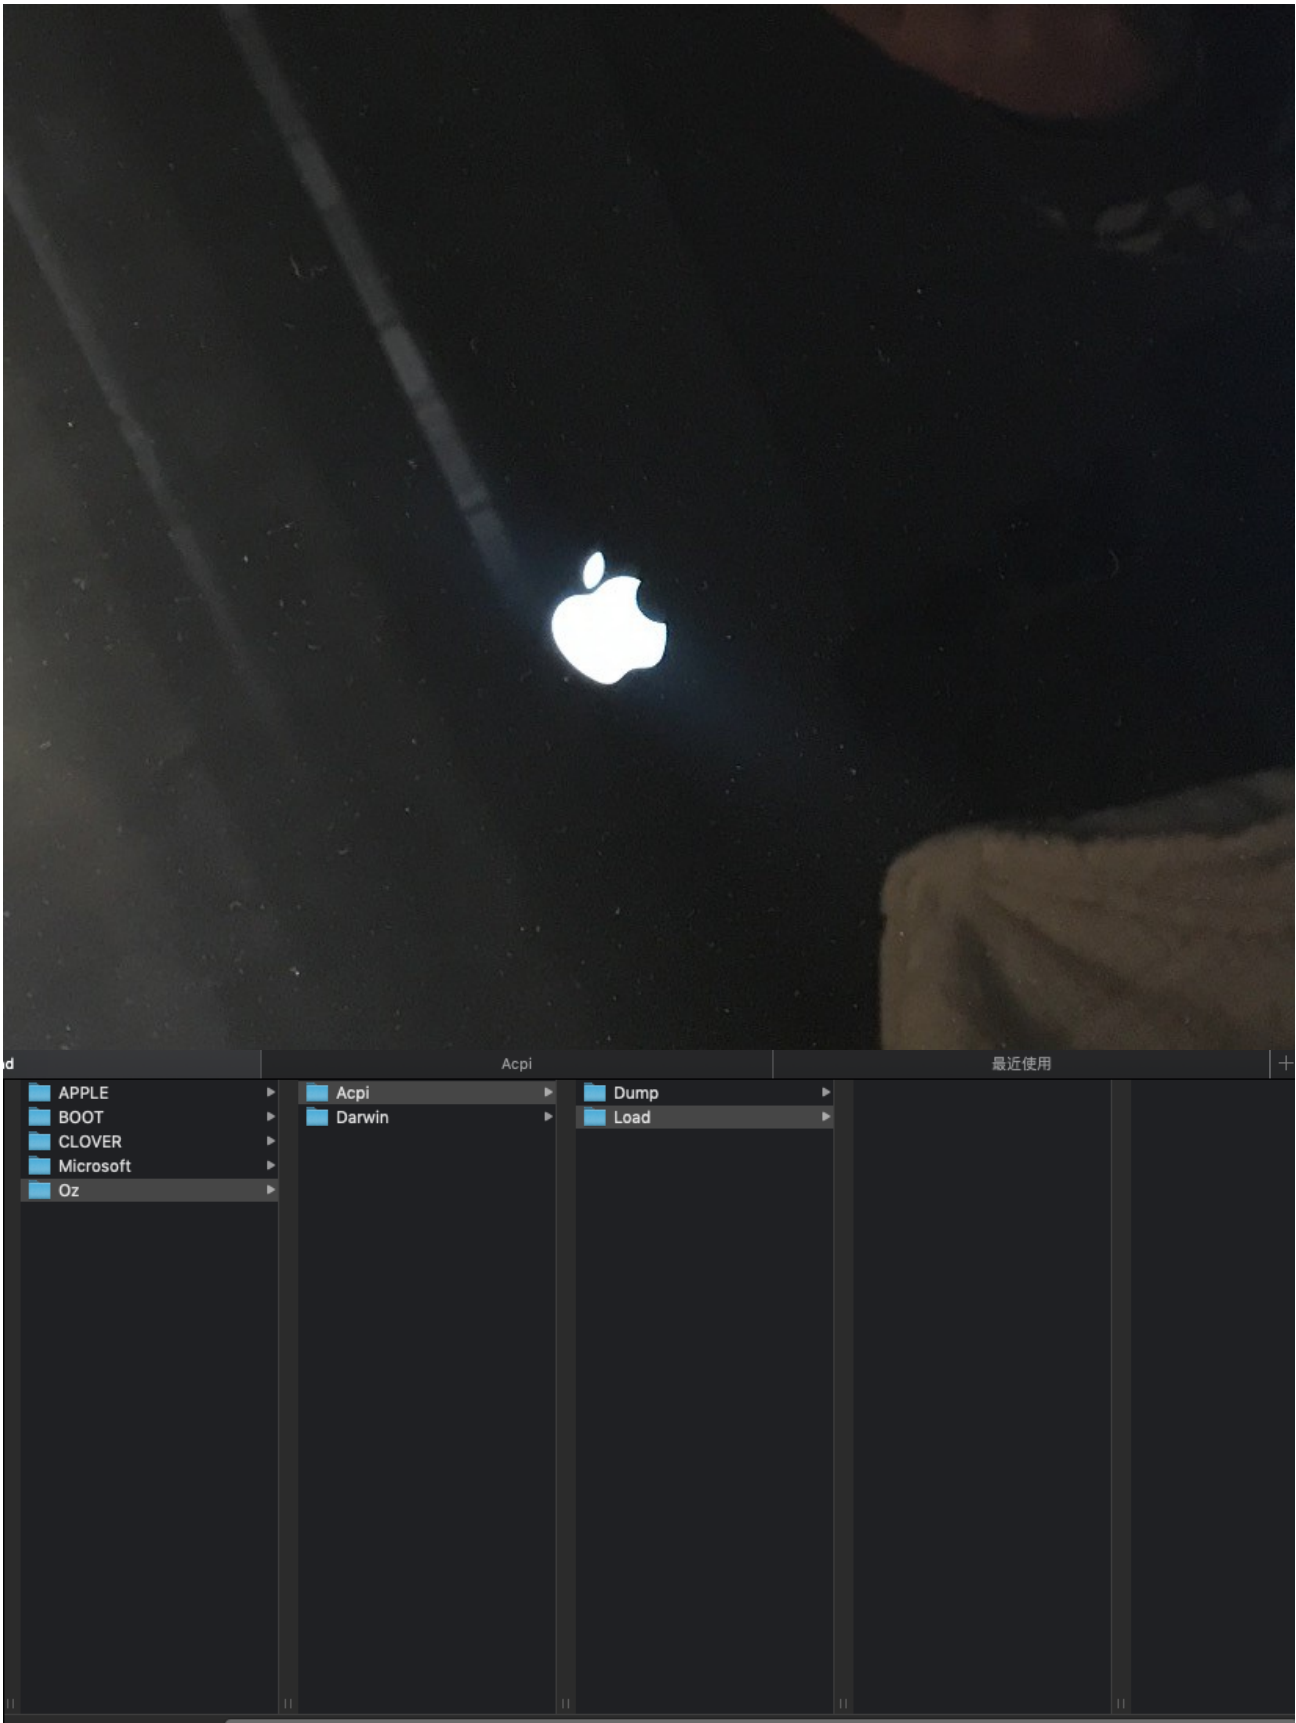

MY Chipsatz HD4600

There is only oz folder under efi folder, there are no files in it, please see the screenshot

MY PC

1. Hersteller intel i7 4790K
2. Modell GIGABYTE B85N Phoenix Wifi rev2.0 not rev1.1
3. Graphics HD4600
4. nvme 256G SSD
5. Install macOS Mojave

stop screen

Reset BIOS to defaults, then set your [BIOS Settings](#) again, set GPU Memory Allocation to 32M, [DVMT](#) to 128 and disable CSM. Afterwards try to start macOS using Boot Override from BIOS.
