Ryzen 7 1700 & ASUS STRIX B350-F GAMING

Beitrag von „TimurLivanov“ vom 16. Januar 2019, 00:52

Hello buddy, help please, I have ryzen 1700 + rx590 I can not install Hackintosh, what should I do? I get a black screen (((

Motherboard - ASUS STRIX B350-F GAMING

The processor - AMD Ryzen 7 1700 3.0GHz,

RAM - Kingston HyperX Predator 16 GB 3000 MHz

Video Card - AMD Radeon RX 590 Red Devil 8 GB

SSD - Plextor S3C 128 GB

Power Supply - Cougar STE 600W

I can not install Hackintosh((((

Hi and welcome to the Forum... 😊

I had to move your request into another, new Thread, since you're dealing with an AMD system and seem to have issues while installing.

Good luck.

[Gigamaxx](#) schreibt dazu: Zlei tested a Sapphire RX 590 and it didn't work. However kikkerr4

tested the RX 590 Nitro+ and it is working, I am testing a XFX RX 590 Fatboy and it is not working either. It looks like PowerColor and Sapphire Nitro+ are the only compatible cards listed working so far.

Demnach müsste sie laufen, mit dem Lilu.kext und Whatevergreen.kext, neueste Versionen

Beitrag von „Gigamaxx“ vom 20. Januar 2019, 18:52

Yes, so far only Sapphire Nitro and Powercolor models work. I tested a Fat Boy and vbios is not compatible. One user flashed bios to Powercolor version and it worked but this is risky if you have a problem.
