What do you tink about TINU so far?

Beitrag von „ITzTravellnTime“ vom 21. März 2019, 11:03

Hi i am the developer of TINU, and i am seeing quite a few people using the app here, in fact i think that this is one of the places in which it's used the most. So this is the right place to get feedback from you.

So, what do you think baout TINU so far?

To guide you to answer this question, try to answer to those ones to make an idea:

How has your experience with TINU been?

How do you feel when using TINU?

Which are the things you love the most about it?

How do you feel TINU is different from others?

Which things are wrong in TINU?

Which are the things you hate about it?

Which are the things you don't understand or you had problems understanding?

Which are the problems you had?

What can be inproved in TINU?

What can be added in TINU to make it better?

Any other thoughts?

Any desired new feature?

Those questions helps me getting an idea about your relationship with TINU and which is your idea of the app, all to guide me to make it better.

Things like this are very important to make apps for every day users, because hearing back from the users is the best way to know what is wrong about the app.

I hope you that many of you will answer me, because i really want to improve your experience and your hackintoshing.

Hello,

I think it's a very easy to use app. It makes life very easy as other tools getting complicated over the time. Im a very big fan of this simple "use this, use that and then do it"-style. I think the UI is pretty perfect because it doesn't have too much annoying and distracting stuff on it. It's more like a pretty basic UI but that's great in any kind. The UI tells you what you need to do and nothing more.

The only thing I really don't understand is an error that occurs when I try to flash the installer for the first time on a formatted drive. I do the same steps a second time and the error is gone away. When I got this error again I am going to send you screenshots of it. But that's not really a problem because second time of use it works fine.

I would love to see a direct integration of Clover Bootloader to the tool. So I don't need to download and install it.

Maybe tinu could download the most common version, opens up the installer and done. Like a little question box "Do you want to install Clover on that drive".

Think you know what I mean.

But thank you in any way using tinu for my Hackintosh and as well for my real Macintosh 😄

Alles anzeigen

Hi, for the error try to recreate it and send me the log after the error occurred

[ITzTravelInTime](#) Thank you very very much for TINU! A wonderful tool! Much better than some “popular” Tomato-tool!

Beitrag von „umax1980“ vom 21. März 2019, 14:00

A Perfect little tool - thanks for you the work.

Beitrag von „Wolfe“ vom 21. März 2019, 14:12

TINU is the best tool so far to create a bootstick with Clover. It's intuitive to use, self-explanatory and complete hence the superiority.

I can't think of anything that might improve it.

Thank you for having created this wonderful piece!

Beitrag von „arigata9“ vom 21. März 2019, 18:05

I think it's a great tool for beginners. It's easy to use and doesn't confuse users at creating their install drive.

Personally I'd wish to see some (terminal-like) verbose output, because I like to see, what's happening in front of me (or maybe I just didn't find the button yet 😊)

Beitrag von „Nightflyer“ vom 21. März 2019, 21:37

Suchst du den?

[ITzTravellnTime](#)

I love this tool. The esayest way to create a installer

Beitrag von „arigata9“ vom 21. März 2019, 21:38

Jap, danke dafür 😄

My objedctive is to defeat the tomato-tool, in fact the name means TINU is not Uni...

Beitrag von „g-force“ vom 22. März 2019, 07:07

Thank you for a really useful tool, works like a charm!

There are 3 (or more) needs for password during process - that`s a bit annoying.

Beitrag von „al6042“ vom 22. März 2019, 21:05

Hi Pietro,

I use TINU all the time to create install media.

Thanks again for this great tool. 🙌👉👈

Beitrag von „Dr.Stein“ vom 22. März 2019, 23:29

Bisher habe ich kein einziges Problem mit Tinu gehabt. Ich mache jeden Installer damit. Sehr einfach zu verstehen und hübsch ist es auch noch.

Danke auch von mir!

Beitrag von „ITzTravellnTime“ vom 23. März 2019, 00:12

If you have any critics or complains, please tell me, i want to know if you find anything wrong or that can be improved

Beitrag von „Mocca55“ vom 23. März 2019, 08:33

Tinu works fine. I make my InstallationSticks for High Sierra and Mojave with Tinu. All works Fine and the Step by Step Help in the Screnn is easy for Everyone. Very nice App.

Greetings Mocca55

And i have also a new update for tinu comimng, i am working on it on the little free time i have in this period, this update is about bugfix and optimization, and a few ui changes

Beitrag von „Thogg Niatiz“ vom 25. März 2019, 01:40

It would be great to be able to repartition the target disk from within TINU to be able to place multiple macOS installers on one disk. Currently I can create multiple partitions on disks with >16G and then use TINU to place installers on each partition. I would like to be able to do than all within TINU: detect if there is space for multiple installer partitions on the target disk, offer to repartition and then placing the chosen installer, or maybe even something like bulk-placing all of the available installers onto the disk.

Beitrag von „REVAN“ vom 25. März 2019, 07:37

That's a pretty good idea. I also want to have multiple macOS Installer on one single usb drive. It would be so much easier to switch between them.

With that in mind it would also be great to make a simple update with tinu. I mean something like if I'm going to select a newer version of macOS installer - Tinu detects the partition of that installer and updates it.

Beitrag von „ITzTravellnTime“ vom 25. März 2019, 10:02

Maybe i can add a feature to auto partition the usb drive into as many installer-ready partition as possible, but making some bulk or automated stuff would require heavy mods to the app, so i don't think i will do it soon, but i think that a viable solution for the actual app could be to have an auto partition feature to add as many installer ready partition as possible or as you want, and then you can put the installers yourself in the partitions using tinu multiple times, but i was thinking about redesigning the drive select screen and the installer app select screen for tinu 3.0 and so maybe adding a multiselect feature for the installer app and an auto format based on how many installers you selected could be good, but this would require also partially reworking the installer creation code to work multiple times and to have the format process as a separated and more advanced thing, so there will be a lot of work required, but i can do it.

And also an installer requires a 7gb partition, so i can optimize it a bit for larger drives and maybe being able to squeeze more installer partitions, consider also some space needed for indexing and the efi partition, so a good algorithm can get the best out of the space you have, the challenge is to implement this within an app since i have to gather all the needed info and then create an optimized autoformat shell script i can run in tinu, since it uses shell scripts (this is for reliability reasons, and you can also take a look at that in the source code)

In the meanwhile i am working on version 2.1.1 and so if you have some issues you want to be fixed, please tell me now.

Beitrag von „ITzTravellnTime“ vom 29. März 2019, 15:51

I have also to say a huge thank you for sharing and using TINU and letting other people to know about it

Beitrag von „arigata9“ vom 18. August 2019, 16:31

Hi [ITzTravelInTime](#)

I just noticed one more thing: could you implement an autoscroll function into the log output while creating an install media?

Also kepp up the great work! 😊
